

AfriFX Academy

Team Tutorial — Admin & Student Walkthrough

Live site: <https://afrixf-academy.onrender.com>

Contents

- Part 1 — Getting Started & Logins
- Part 2 — Admin Tutorial (running the platform)
- Part 3 — Student Tutorial (using the platform)
- Part 4 — Good to Know (free-tier behavior, limits, safety notes)

Part 1 — Getting Started

Logins

Role	Where	Email	Password
Admin	/admin/login	admin@afrixf.com	admin123
Student	Normal Login page	student@afrixf.com	student123

First load is slow (~30–60 seconds). The site runs on a free hosting plan that "sleeps" after 15 minutes with no visitors, and wakes up on the next request. Give it a moment — it's fast after that until it goes idle again.

Team tip: Have everyone open the site a minute before a training session starts so it's already awake by the time you begin.

Part 2 — Admin Tutorial

Log in at `/admin/login`. Everything below lives in the left sidebar.

1. AfriFX Dashboard

Your admin landing page — quick snapshot of the platform.

2. Students

- See every student, their enrollments, progress, and certificates.
- Click a student to open their detail page: enrolled courses, quiz results, certificates.
- Promote/demote roles (student / instructor / admin) and reset a student's password.

3. Courses — building a course from scratch

Step 1 — Create the course

Courses → + **New Course** → fill in Title, Description, Category, optional Thumbnail URL → Save.

Step 2 — Add modules

On the course card, click + **Module** → give it a title (e.g. "Module 1: Fundamentals") and an order number → Save. Repeat for each module.

Step 3 — Add lessons

Inside a module, click + **Lesson** → Title, paste a **YouTube URL**, set Duration, an optional description, and order → Save.

Video hosting note: Lessons currently use YouTube links (free, unlimited, automatic HD). Uploading your own video files is possible but needs an external storage account first (discussed separately) — the database here is too small (0.5 GB free) for video files.

Step 4 — Add a quiz to a module (new!)

Each module can have **one quiz**, shown to students after they finish the module's last lesson.

- On the module row, click  + **Quiz**.
- Add a question, type the question text, fill in 2–4 answer options, and click the radio button next to the **correct** option.
- Click + **Add Question** to add more questions; **Remove** to delete one.
- Click **Save**. To change it later, click  **Edit Quiz** on that module; **Delete Quiz** removes it (and students' past results for it).

Passing a quiz (60%+) awards points; a perfect score (100%) earns the "Perfectionist" badge and bonus points — these feed the gamification Leaderboard.

Step 5 — Add resources (optional)

On any lesson, click  **Resource** to upload a PDF/file (max 20 MB) or paste an external link.

4. Signals

Post daily trading signals — pair, type (Forex/Gold/Crypto/Indices), direction, entry, stop-loss, and up to 3 take-profit levels. Mark a signal **won/lost** with pips once it closes — this feeds the public **Performance** page (win-rate, monthly pip charts). Signals are visible to **every logged-in student for free** — no subscription required.

5. Paper Trading (admin has full access too)

Click **Paper Trading** in your sidebar to use the exact same MT5-style demo trading simulator students use — same \$10,000 demo balance, lots, Stop Loss/Take Profit, pending orders, and the trading leaderboard. Handy for testing signals or showing students how to place a trade.

6. Performance (new!) — see how your students are doing

Performance in the sidebar has two boards:

- **Trading Performance** — every student ranked by net profit/loss from paper trading, with a **Top Traders / Top Losers** toggle. Click **View Trades** on any student to see their complete trade-by-trade history (instrument, entry/exit, P&L, why it closed, when).
- **Best Quiz Students** — ranked by average quiz score, quizzes taken, and perfect scores.

Use this to spot your most engaged/skilled students, or students who might need extra help (bottom of either board).

7. Meetings

Schedule live sessions/webinars. If Google Calendar is connected, Meet links generate automatically; otherwise paste a link manually. Students get a notification.

8. Announcements

Post a message → every student sees it via the notification bell (and email, if configured).

9. Applications

Review partnership/IB/seminar sign-ups submitted from the public partner pages. Approve or decline.

10. Analytics

Enrollment trends (last 6 months), course completion rate, and most popular courses.

11. Certificates

View every certificate issued, or manually issue one to a student for any course.

Part 3 — Student Tutorial

Register a new account or log in at the normal Login page.

1. AfriFX Dashboard

Your home base — resume your last lesson, see your streak, upcoming meetings, latest signals, and quick stats.

2. Courses

- **Courses** → open one → **Enroll**.
- Watch lessons in order; progress is tracked automatically.
- After the last lesson in a module, a **Module Quiz** appears (if the admin added one) — multiple choice, submit once every question is answered, see your score instantly. You can retake it as many times as you like.
- Finish the whole course to unlock a **Certificate** (PDF with a QR code anyone can scan to verify it's genuine).

3. Live Markets

Real TradingView charts for Forex, Gold, and Crypto — for analysis, not trading directly.

4. Paper Trading — practice trading risk-free

Click **Paper Trading**. You start with a **\$10,000 demo balance** — completely virtual, no real money involved, ever.

Placing a trade

- Pick an **Instrument** (EUR/USD, GBP/USD, USD/JPY, AUD/USD, USD/CAD, Gold, BTC, ETH).

- Choose **Order type**: Market Execution (fills now), or a pending order (Buy/Sell Limit, Buy/Sell Stop, Buy/Sell Stop Limit) that waits for price to reach a level you set.
- Set your **Volume (lots)** using the steppers.
- Optionally set a **Stop Loss** and **Take Profit** — a live calculator shows the pip distance, point distance, and exact dollar risk/reward as you type.
- Click **SELL** or **BUY** (market), or **Place [order type]** (pending).

Managing trades

- **Open Positions** table — live P&L, **Modify SL/TP**, or **Close**.
- **Pending Orders** table — edit levels or **Cancel** before they trigger.
- A **Position overlay** panel under the chart shows your current instrument's trades as MT5-style colored lines (green TP, blue entry with live P&L, red SL).
- **Margin Level** is shown in your account summary — if it drops below 100% you'll see a Margin Call warning; below 50% your worst-losing trade is **automatically closed** (Stop Out) to protect your balance, exactly like a real broker.

Reset demo restores your balance to \$10,000 and clears any open/pending trades — but your **closed trade history stays forever**, so your leaderboard ranking is never erased by resetting.

Trading Leaderboard

See every student ranked by real trading results — **Top Traders** and **Top Losers**. Your own row is highlighted in gold.

5. Signals

Daily Forex/Gold/Crypto/Indices signals with entry, stop-loss, and take-profit levels — free for every logged-in student.

6. Performance

Public track record of the academy's own posted signals — win rate, pips, monthly performance.

7. Leaderboard

Points and badges from learning activity (lessons watched, quizzes passed, streaks) — separate from the trading leaderboard.

8. Meetings, Certificates, Student ID, My Account, Membership

Join scheduled live sessions, view/download your certificates, see your digital Student ID card, manage your profile/password, and check membership tiers (Free / Premium / VVIP).

Part 4 — Good to Know

Thing	What to expect
First visit	~30–60s wake-up delay on free hosting — normal, not a bug.
Payments	Membership/VVIP/signal-subscription checkouts are demo only — no real money is ever charged.
Paper trading	100% virtual funds — never real money, ever, by design.
Chart drawings	Analysis/drawings on the TradingView chart don't save when you switch instruments — a known limitation of the free chart widget.
Video lessons	Currently YouTube-hosted. Real file uploads possible later with an external storage account.
