

AfriFX Academy

Online Forex Education & Trading Community Platform

Demo Walkthrough & Overview

Welcome

This document walks you through your new **AfriFX Academy** platform — a complete online academy where students can learn Forex trading, take courses, earn certificates, follow your trading signals, and join your community. It also gives you a powerful admin area to run the whole business from one place.

This is a **working live demo**. You can open it right now, log in, and click around exactly as your real students and staff would.

Try the live demo: <https://afrixfx-academy.onrender.com>
(The first time you open it, please allow ~30–60 seconds for it to load — the demo "wakes up" on first visit. After that it is fast.)

Your demo logins

Two accounts are ready so you can experience **both sides** of the platform:

Experience this side	Email	Password
Student (the learner's view)	student@afrixfx.com	student123
Admin (your control centre)	admin@afrixfx.com	admin123

The admin area is reached by adding **/admin/login** to the web address.

What your students can do

Log in as the **student** account to see this side of the platform.

- **Browse & enroll in courses** — students sign up and join your training programs.
- **Watch video lessons** — each course has modules and lessons; progress is tracked automatically.
- **Take quizzes** — test knowledge and earn points.
- **Earn certificates** — on finishing a course, students get a professional PDF certificate with a QR code that anyone can scan to verify it is genuine.
- **Follow trading signals** — your buy/sell signals with entry, stop-loss and take-profit levels.
- **See live market prices & charts** — real Forex and crypto prices, built in.
- **View your track record** — a public performance page showing win-rate and results.
- **Join live meetings** — scheduled online sessions / webinars.
- **Compete on the leaderboard** — points and badges keep students engaged.
- **Manage their account** — profile, password, membership and payment history.

What you (the admin) can do

Log in as the **admin** account (at /admin/login) to see your control centre.

- **Create & manage courses** — add courses, modules, lessons, quizzes and downloadable resources.
- **Manage students** — see everyone, track their progress, change roles, reset passwords.
- **Post trading signals** — publish signals and record results that feed your performance page.
- **Issue certificates** — automatically on course completion, or manually to any student.
- **Send announcements** — notify all students (with a notification bell and optional email).
- **Schedule meetings / webinars** — with automatic Google Meet links.
- **Review applications** — partnership, IB and seminar sign-ups from your public pages.
- **See business analytics** — enrollments, completions, active students, revenue and more.
- **Membership tiers** — Free, Signal Subscription, Premium and VVIP levels.

A quick guided tour (5 minutes)

Step 1. See the student experience

- Open the site and log in with the **student** account.
- Go to **Courses**, open the sample course, and **Enroll**.
- Open a lesson and watch how the learning screen works.
- Visit **Markets**, **Signals** and the **Leaderboard** to feel the full student journey.

Step 2. See your admin control centre

- Log out, then go to the web address with **/admin/login** and use the **admin** account.
- Open **Courses** and try creating a new course, module and lesson.
- Open **Students**, **Signals** and **Analytics** to see how you would run things day to day.

Please note — this is a demo

- **Sample data:** the demo comes pre-loaded with one example course and demo accounts so you have something to click through. Your real content would replace this.
- **Payments are in demonstration mode:** "Upgrade" and "Subscribe" buttons work and activate instantly, but **no real money is charged**. Connecting real payments (Mobile Money, card, PayPal) is a simple add-on when you are ready to go live.
- **Free demo hosting:** the demo is on a free plan, which is why the very first visit is slow. The live business version would run on an always-on plan with no delay and your own web address (for example **academy.afrixf.com**).

Ready to go live? What's next

When you are happy with the demo, here is what turning it into your real, public business looks like:

Step	What it means
Your branding	Add your logo, colours, photos and wording throughout.
Your content	Load your real courses, lessons, videos and signals.
Real payments	Connect Mobile Money / card / PayPal so you can collect subscriptions and fees.
Your web address	Point your own domain (e.g. academy.afrixf.com) to the platform.
Always-on hosting	Move to a paid plan so the site is instant 24/7 with no wake-up delay.

Email & meetings	Connect your email for notifications and Google for automatic meeting links.
