

AfriFX Academy — User Manual

Live site: <https://afrixf-academy.onrender.com>

First load is slow (~30–50 seconds). The free hosting plan puts the server to sleep after 15 minutes with no visitors. The next visitor wakes it up, which takes about 30–50 seconds. After that it is fast until it goes idle again. This is normal for free hosting.

1. Logins

Role	Where to sign in	Email	Password
Admin	/admin/login	admin@afrixf.com	admin123
Student	Normal Login page	student@afrixf.com	student123

- **Students** sign in (or register a new account) at the normal Login page.
- **Admins** sign in at `/admin/login` — e.g. <https://afrixf-academy.onrender.com/admin/login>

Tip: Change the admin password after your first login (see Section 6).

2. What the platform does

AfriFX Academy is a full Forex-education platform with two sides:

- **Student portal** — take courses, watch lessons, do quizzes, earn certificates, see trading signals, view live markets, join meetings, climb the leaderboard.
- **Admin portal** — manage everything: courses, students, signals, announcements, certificates, meetings, partnership applications, and analytics.

3. Student guide

Getting started

- Register a new account, or log in.
- Browse **Courses** → open a course → click **Enroll**.
- Open a lesson to start the Lesson Viewer (video + resources).

Key student features

- **Courses & Lessons** — watch video lessons; progress is tracked automatically.
- **Quizzes** — at the end of modules; passing earns points.
- **Certificates** — after completing a course, go to Certificates and click Claim / Download PDF. Each certificate has a QR code and a public verification link.
- **Markets** — live Forex/crypto prices and charts.
- **Signals** — trade signals (entry, stop-loss, take-profit). Access depends on membership tier.
- **Performance** — public win-rate / pips track record from closed signals.
- **Leaderboard** — points & badges ranking (from lessons + quizzes).
- **Meetings** — scheduled live sessions (Google Meet links).
- **Profile / My Account** — change password, view payments & subscription.

Membership tiers

- **Free** — courses + basic access.
- **Signal subscription** (\$5/month) — unlocks trading signals.
- **VVIP** (\$50 lifetime) — permanent signal access.
- **Premium** — extended access.

Payments are in DEMO/MOCK mode. Clicking "Upgrade" or "Subscribe" activates instantly **without charging anyone**. To take real money you would connect a real payment gateway (Mobile Money / Stripe / PayPal) with your own keys.

4. Admin guide

Log in at </admin/login>. The admin sidebar gives you:

Courses

- Create a course (title, description, thumbnail, category).
- Add **Modules** → add **Lessons** (video URL, duration) and **Quizzes**.
- Add **Resources** to lessons: upload a file (PDF, etc.) or paste a link. Uploaded files are stored safely in the database.

Students

- View all students; open one to see progress, enrollments, points.
- Promote/demote roles (student / instructor / admin).
- Reset a student's password if needed.

Signals

- Post new trade signals (pair, direction, entry, SL, TP1–TP3).
- Mark signals won/lost and record pips → feeds the public Performance page.

Certificates

- View all issued certificates.
- Manually issue a certificate to any student for any course.

Announcements

- Post announcements → students get a notification (bell) and an optional email.

Meetings

- Schedule live sessions. With Google Calendar connected, Meet links auto-generate; otherwise paste a link.

Applications

- Review partnership/IB/seminar applications from the public partner pages.

Analytics

- Dashboards: enrollments, completions, revenue (mock), active students, etc.

5. Adding content (typical workflow)

- Log in as admin → **Courses** → **New Course**.
- Open the course → **Add Module** → **Add Lesson** (paste a YouTube embed URL like https://www.youtube.com/embed/VIDEO_ID).
- Optionally add a **Quiz** to the module and **Resources** to the lesson.
- Students can now enroll and learn.

6. Important admin tasks

Change the admin password

- Log in as admin → Profile / My Account → Change Password.
- (Or create a new admin account and remove the demo one.)

Reset the database password (optional security step)

- Go to console.neon.tech → your afrifx project → Connect.
- Click Reset password → copy the new pooled connection string.
- In Render → Environment → update `DATABASE_URL` → Save (auto-redeploys).

7. Pushing future updates

Whenever the code changes on your computer:

```
cd "C:/Users/Admin/Desktop/solars babbershop/afrifx-academy"
git add .
git commit -m "describe your change"
git push
```

Render **auto-deploys** every push to the `main` branch. Wait a few minutes and the live site updates automatically.

8. Running it locally (for development)

```
// Terminal 1 – backend API (http://localhost:5000)
cd "C:/Users/Admin/Desktop/solars babbershop/afrifx-academy/server"
npm run dev

// Terminal 2 – frontend (http://localhost:5173)
cd "C:/Users/Admin/Desktop/solars babbershop/afrifx-academy/client"
npm run dev
```

Then open `http://localhost:5173`.

Note: Local dev shares the **same live database** as your deployed site, so changes affect real data. To avoid this, create a second free Neon project for testing and use its URL in `server/.env`.

9. Free-tier limits

Item	Limit	Notes
Server sleep	After 15 min idle	First visit then takes ~30–50s to wake
Database size	0.5 GB (Neon free)	Plenty for a demo; uploads stored here too
Database sleep	Auto-suspends when idle	Wakes automatically on first query

Build minutes	Generous free allowance	Each git push triggers a rebuild
---------------	-------------------------	----------------------------------

Want no cold starts / always-on? Upgrade the Render service to the Starter plan (\$7/month) — removes the sleep delay and adds Shell access, persistent disk, etc. Not required; the free setup works fine for a demo/portfolio.

10. Quick troubleshooting

Problem	Fix
Site slow / spinning on first visit	Normal cold start — wait ~40 sec
"Can't reach database" after long idle	Refresh once; Neon is waking up
Login fails	Use the exact demo credentials; make sure data is seeded
Need to re-seed demo data	Run <code>npm run seed</code> in the server folder locally
Changes not showing on live site	Did you git push? Check Render → Events

Built with React + Express + Prisma + PostgreSQL. Hosted free on Render + Neon. Accounts: GitHub (DaveOps/afrifx-academy) · Database (Neon) · Hosting (Render).
